SUMMARY

Data Engineer building ETL pipelines, operational data models, and the tables downstream teams query. At SKF (Fortune 500), replaced paper factory audits with an 11-screen production system: each audit is 1 queryable row across 5 pillars, with zone-scoped write-back and score-card views plant leads use. Also supported technical sessions for the IEEE student branch at PES, Aug 2023 to Sep 2024. Projects: NammaPulse, a Bengaluru weather, air, and mobility warehouse, and Creator Lab, a snapshot pipeline of 100 creators and about 3,500 videos. Skills: Python, SQL, PostgreSQL, pandas, data modeling, API ingestion, ETL, and Power BI. Seeking a Data Engineer role.

PROFESSIONAL EXPERIENCE

Data Engineer Intern, SKF (Fortune 500 Industrial Technology) May 2026 – Present | Bangalore

- Replaced paper 5S factory audits with an 11-screen production Power Apps system on the SKF Office 365 tenant; factory teams now capture scores, photo evidence, and actions as structured records instead of paper forms.
- Modeled audit drafts and zone lists with identity-aware, zone-scoped write-back into SharePoint, so each submitted audit is 1 queryable row rather than a file in email.
- Defined the grain as 1 audit across 5 pillars and served score-card views to plant leads: per-pillar totals, pass/fail against a qualifying bar, and the weakest pillar on every audit.

GenAI Data Analytics Job Simulation, Tata Group (Forage) 2024

- Modeled delinquency risk on structured financial datasets and wrote the next action a stakeholder could take.

Technical Support, IEEE Student Branch, PES College of Engineering Aug 2023 – Sep 2024

- College club role. Supported technical sessions for the IEEE student branch: setup, troubleshooting, and keeping events running for speakers and attendees.

PROJECTS

Creator Lab | Python, SQLite, YouTube Data API, Streamlit Live
know-stats.streamlit.app · github.com/bannushaxddd/indian-creator-lab

- Built a YouTube Data API pipeline into SQLite for 100 Indian creators (50 tech, 50 fashion) and about 3,500 videos, stored as snapshots so views, likes, and comments are a time series rather than a one-time scrape.
- Defined engagement as (likes + comments) / views and outlier as views versus that creator's own median, so a small channel is not ranked against a large one.
- Shipped a public Streamlit app that scores a draft title and cut against that table and returns a view range plus the nearest videos already stored.

NammaPulse | Python, PostgreSQL, PostGIS In progress

- Building a Bengaluru warehouse for weather, air, and mobility feeds that do not share a schema, a clock, or a location model.
- Landing each pull as a raw payload, writing invalid rows to a reject table, and modeling ward, station, and date dimensions in PostgreSQL and PostGIS.

EDUCATION

B.Tech, Artificial Intelligence & Machine Learning, PES College of Engineering 2023 – Expected 2027
Bangalore, India

Certifications: Generative AI: Prompt Engineering Basics, IBM · GenAI Powered Data Analytics, Tata Group (Forage), 2024

TECHNICAL SKILLS

Data engineering: ETL, data pipelines, data modeling, API ingestion, schema design, snapshot tables, data quality

SQL & databases: SQL, PostgreSQL, MySQL, SQLite, joins, window functions, parameterized queries

Python: Python, pandas, NumPy, API clients, scikit-learn

BI & tools: Power BI, Streamlit, Grafana, Docker, Git, Power Apps, SharePoint, Office 365
