# BANNUSHA SHAIK

**Data Engineer | Power BI · SharePoint · Power Apps · Data Modeling**

Bangalore, India · bannushashaik85@gmail.com · linkedin.com/in/bannushashaik400 · bannusha.com

## SUMMARY

Coursework in artificial intelligence and machine learning, specialising in data modeling and warehouse design across SQL, Python, Power BI, Snowflake, Databricks, and Microsoft Fabric. At SKF I ship semantic models for project lead time and scrap value, and an 11-screen audit app.

## PROFESSIONAL EXPERIENCE

**Data Engineer Intern, SKF (Fortune 500 Industrial)** May 2026 – Present | Bangalore

*Power BI · SharePoint · Power Apps · Excel · DAX · data modeling · Office 365*

- Shipped an industrial project tracker: one row per activity, average beside P90, and on-time by task category, product family, and assignee.
- Shipped a finance scrap model on the raw posting workbook, not the year-to-date summary. Grain is one line. A visual ships only if the file can support it.
- Replaced paper 5S audits with an 11-screen Power Apps and SharePoint system. Grain is one audit across five pillars, with identity-aware, zone-scoped write-back and pillar scorecards.

**GenAI Data Analytics Job Simulation, Tata Group (Forage)** 2024

- Worked delinquency risk on structured financial datasets and wrote the next action a stakeholder could take, tied to the fields in the data. A job simulation, not employment.

**Technical Support, IEEE Student Branch, PES College of Engineering** Aug 2023 – Sep 2024

- College club. Setup and troubleshooting for technical sessions so the room was ready before the talk started.

## PROJECTS

**Elgin-GTCI Industrial Project Tracker** SKF · Power BI

*Semantic model · task category · product family · priority · assignee*

- Operating report for the industrial project queue. Average and P90 sit side by side so one long job cannot hide inside the mean.
- Filters for input date, product family, task category, priority, and assignee keep a plant review on one page.

**Finance Scrap Analysis** SKF · SharePoint Excel

*SharePoint workbook · one row per posting · reason, material, item, day*

- Finance model on the raw posting file, not a summary workbook. Cards, daily scrap, reasons, material mix, and scrap by item.
- A posting-day view replaces a month chart the file cannot support, so the report stays aligned to the source.

**5S Audit Management** SKF · Power Apps

*SharePoint lists · 11 screens · identity-aware write-back · Power BI scorecards*

- Paper checklists became queryable rows: scores, photo evidence, and corrective actions across five pillars.
- Drafts stay out of the trend. Write-back is limited to the zones an identity is allowed to touch. Scorecards flag the weakest pillar.

## TECHNICAL SKILLS

Data engineering: data modeling, grain, measures, SharePoint lists, Excel sources, data quality
BI & apps: Power BI, DAX, semantic models, Power Apps, scorecards, Office 365
SQL & Python: PostgreSQL, MySQL, SQLite, pandas, Snowflake, Databricks, Microsoft Fabric, dbt, Apache Airflow, Kafka, Delta Lake, Apache Iceberg
Plant metrics: lead time, on-time completion, scrap value, reason codes, 5S scores

## EDUCATION & CERTIFICATIONS

**B.Tech, Artificial Intelligence & Machine Learning, PES College of Engineering** 2023 – Expected 2027

*Machine Learning Specialization, Coursera · IBM Generative AI Prompt Engineering · Tata Group GenAI Data Analytics (Forage), 2024*
