

BANNUSHA SHAIK

Product Manager | Analytics & Strategy · AI/ML-Driven Consumer Products

Bangalore, India · +91 8074671779 · bannushashaik85@gmail.com · linkedin.com/in/bannushashaik400 · bannusha.com · github.com/bannushaxddd

SUMMARY

Product Manager (B.Tech AIML) with a Fortune 500 internship at SKF translating factory-floor stakeholder needs into a shipped product, and a five-part independent portfolio (teardowns, a full PRD, a metrics case study, a competitive analysis) built around one thesis: consumer products optimize operational metrics while users optimize trust — and the highest-leverage PM work sits in that gap. Reads data directly (SQL, Python, Power BI) rather than waiting on a data team, and turns it into prioritized roadmaps, PRDs, and falsifiable experiments. Targeting Associate/Product Manager and Product Analyst roles in consumer tech.

PRODUCT PORTFOLIO — bannusha.com

Swiggy — Product Teardown | Funnel Analysis · UX Research

- Diagnosed the highest-severity leak in Swiggy's funnel — an invisible, binary cancellation cutoff with a silent surprise charge — and proposed three fixes targeting ~20% cancellation-related support tickets, each with a guardrail.

Spotify — Product Teardown | Recommender Systems · Retention

- Identified the engagement-vs-satisfaction gap in Spotify's recommender and proposed an opt-in “escape the bubble” exploration surface, tied to recommendation diversity and 90-day retention.

PRD — Order Escape Hatch (Swiggy) | Product Spec · Experiment Design

- Wrote a full PRD — problem statement, goals/non-goals, user stories, acceptance criteria, phased rollout, analytics instrumentation — targeting +10% post-cancellation 30-day retention without loosening the operational cutoff.

Metrics Case Study — +20% Order Frequency | Metric Decomposition · A/B Testing

- Decomposed order frequency into habit, value, friction, and trust levers, ranked by $\text{impact} \times \text{confidence} \div \text{effort}$, and designed a falsifiable A/B experiment with guardrails and a $p < 0.05$ success threshold.

Competitive Analysis — Indian Food Delivery | Swiggy · Zomato · Zepto · ONDC

- Positioned four players on a speed-vs-selection matrix; argued delivery speed is now commoditized and trust/habit mechanics are the real competitive battleground.

PROFESSIONAL EXPERIENCE

Software and Product Development Intern, SKF (Fortune 500)

May 2026 – Present | Bangalore

- Gathered requirements from factory-floor stakeholders (auditors, department leads, compliance owners) and translated paper-based audit pain points into a scoped, 11-screen product spanning all five 5S pillars.
- Owned prioritization and scoring logic: per-pillar question banks, department/zone selection flows, and weighted qualification thresholds — balancing auditor speed against measurement accuracy.
- Drove adoption by replacing an entrenched paper process — partnered with O365/SharePoint admins and factory leadership to ship score-card and compliance-trend views for ongoing decision-making, with identity-aware, zone-scoped access per stakeholder.

GenAI Data Analytics Job Simulation, Tata Group (Forage)

2024

- Modeled delinquency risk on financial datasets with GenAI-assisted analysis; synthesized findings into executive-ready recommendations for non-technical stakeholders.

SKILLS

Product: PRD Writing · Product Teardowns · Roadmapping · Prioritization Frameworks · User Stories · Competitive Analysis · Go-to-Market

Analytics: Metric Decomposition · Funnel & Cohort Analysis · A/B Testing · SQL · Power BI · Pandas/NumPy · Experiment Design

Technical Fluency: Python · REST APIs · System Design Basics · LLMs/GenAI · Machine Learning · Git

Tools: Notion · Jira · Figma (wireframing) · GitHub · Power Apps · SharePoint · Office 365

EDUCATION & CERTIFICATIONS

B.Tech, Artificial Intelligence & Machine Learning, PES College of Engineering

Expected May 2027

Certifications: Generative AI: Prompt Engineering Basics, IBM · GenAI Powered Data Analytics, Tata Group (Forage)
