SUMMARY

Data Engineer with a B.Tech in Artificial Intelligence & Machine Learning and hands-on work building pipelines, data models, and the applications that sit on them. At SKF (Fortune 500), turned paper factory audits into a production data system: SharePoint-backed rows, zone-scoped write-back, and score-card views plant leads use. Independently built a YouTube snapshot pipeline (100 creators, ~3,500 videos) and a schema-locked SQL generator across 8 dialects with PostgreSQL history. Skilled in Python, SQL, PostgreSQL, data modeling, APIs, and ETL. Seeking a Data Engineer role.

PROFESSIONAL EXPERIENCE

Data Engineer Intern, SKF (Fortune 500 Industrial Technology)

May 2026 – Present | Bangalore

Microsoft Power Platform · SharePoint · Office 365 · Power BI · factory operations

- Replaced paper 5S factory audits with a production 11-screen Power Apps system on the SKF Office 365 tenant; factory teams capture scores, photo evidence, and actions as structured records.
- Modeled operational data (audit drafts, zone lists) with identity-aware, zone-scoped write-back into SharePoint so an audit is a queryable row, not a file in email.
- Defined grain as one audit across five 5S pillars and served score-card and compliance-trend views: per-pillar totals, pass/fail against a qualifying bar, weakest pillar for plant leads.

GenAI Data Analytics Job Simulation, Tata Group (Forge)

2024

- Modeled delinquency risk on structured financial datasets and wrote the next action a stakeholder could take. Simulation, labeled as such.

PROJECTS

Indian Creator Lab | YouTube Data API, SQLite, pandas, scikit-learn, Streamlit

Live

know-stats.streamlit.app · github.com/bannushaxddd/indian-creator-lab

- Ingested the YouTube Data API into SQLite for 100 Indian creators (~3,500 videos) using a video key and a snapshot grain so views, likes, and comments are a time series, not a one-time scrape.
- Defined engagement as (likes + comments) / views and outlier as views / that creator's median, then served a Streamlit app that scores a draft title and cut against the table and returns a view range plus nearest videos.

GETYOQUERY | SQL, PostgreSQL, 8 dialects, schema-locked generation

github.com/bannushaxddd/GETYOQUERY

- Built an English-to-SQL service across 8 dialects (PostgreSQL, MySQL, SQLite, SQL Server, BigQuery, Snowflake, Oracle, DuckDB) that accepts CREATE TABLE as a hard constraint, stores query history in PostgreSQL, and runs parameterized queries so generated SQL cannot invent column names.

Pipeline observability | Prometheus, Grafana, Loki, Alertmanager, Docker

github.com/bannushaxddd/prometheus-grafana-stack

- Stood up a Docker Compose metrics and log stack: Prometheus, Loki, Alertmanager, database exporters, custom application /metrics, and Grafana boards for system, app, and database health.

TECHNICAL SKILLS

Data engineering: ETL, data modeling, snapshot pipelines, API ingestion, schema design, data quality constraints

SQL & databases: SQL, PostgreSQL, MySQL, SQLite, joins, grain, parameterized queries, query history

Python: Python, pandas, NumPy, API clients, feature tables, scikit-learn

Serve & operate: Streamlit, Power BI, Grafana, Docker, Redis, Git

Also: Power Apps, SharePoint, Office 365, Excel

EDUCATION & CERTIFICATIONS

B.Tech, Artificial Intelligence & Machine Learning, PES College of Engineering

Bangalore

Certifications: Generative AI Prompt Engineering Basics, IBM · GenAI Powered Data Analytics, Tata Group (Forge)
