BANNUSHA SHAIK

Data Engineer | Power BI · SharePoint · Power Apps · Data Modeling

Bangalore, India · +91 8074671779 · bannushashaik85@gmail.com · linkedin.com/in/bannushashaik400 · bannusha.com

SUMMARY

Data Engineer intern at SKF, a Fortune 500 manufacturer in Bengaluru. I build the data layer plant and finance teams use: SharePoint models, Power Apps capture, and Power BI for project lead time, scrap value, and 5S audits. Grain and measures are set before a visual ships, so a number in a review can be traced to a row.

PROFESSIONAL EXPERIENCE

Data Engineer Intern, SKF (Fortune 500 Industrial) May 2026 – Present | Bangalore

Power BI · SharePoint · Power Apps · Excel · DAX · data modeling · Office 365

- Shipped the Elgin-GTCI Industrial Project Tracker: 100 completed activities, 8 under feedback, a 17.8-day average lead time, and a 5-day median.
- Designed average and P90 lead time by task category, product family, and assignee. On-time completion runs from 83% on Tooling Design to 40% on Product Design.
- Shipped Finance Scrap Analysis on Raw Dump.xlsx in the Mysuru factory SharePoint library: 6.72M scrap value, 6.13M production scrap, 294 items, 2,780 posting lines through 17 September 2026.
- Replaced paper 5S audits with an 11-screen Power Apps and SharePoint system. Grain is one audit across five pillars, with identity-aware, zone-scoped write-back and pillar scorecards.

GenAI Data Analytics Job Simulation, Tata Group (Forage) 2024

- Worked delinquency risk on structured financial datasets and wrote the next action a stakeholder could take, tied to the fields in the data. A job simulation, not employment.

Technical Support, IEEE Student Branch, PES College of Engineering Aug 2023 – Sep 2024

- College club. Setup and troubleshooting for technical sessions so the room was ready before the talk started.

PROJECTS

Elgin-GTCI Industrial Project Tracker SKF · Power BI

Semantic model · task category · product family · priority · assignee

- Operating report for the industrial project queue. Average and P90 sit side by side so one long job cannot hide inside the mean.
- Filters for input date, product family, task category, priority, and assignee keep a plant review on one page.

Finance Scrap Analysis SKF · SharePoint Excel

Raw Dump.xlsx only · Mysuru factory · one row per posting

- Finance model on the raw posting dump, not the year-to-date summary file. Cards, daily scrap, reasons, material mix, and scrap by item.
- Daily posting view replaces a month chart the dump cannot support, so the report stays aligned to the source file.

5S Audit Management SKF · Power Apps

SharePoint lists · 11 screens · identity-aware write-back · Power BI scorecards

- Paper checklists became queryable rows: scores, photo evidence, and corrective actions across five pillars.
- Drafts stay out of the trend. Write-back is limited to the zones an identity is allowed to touch. Scorecards flag the weakest pillar.

TECHNICAL SKILLS

Data engineering: data modeling, grain, measures, SharePoint lists, Excel sources, data quality
BI & apps: Power BI, DAX, semantic models, Power Apps, scorecards, Office 365
SQL & Python: PostgreSQL, MySQL, SQLite, pandas, source reconciliation
Plant metrics: lead time, on-time completion, scrap value, reason codes, 5S scores

EDUCATION & CERTIFICATIONS

B.Tech, Artificial Intelligence & Machine Learning, PES College of Engineering 2023 – Expected 2027

Machine Learning Specialization, Coursera · IBM Generative AI Prompt Engineering · Tata Group GenAI Data Analytics (Forage), 2024
