SUMMARY

Data Analyst with a Fortune 500 internship at SKF turning factory operations into structured data, scorecards, and compliance-trend views for plant leadership. Builds end-to-end analytics: API collection, SQL and Python (pandas, scikit-learn), snapshot tables, and live dashboards. Shipped Indian Creator Lab — 3,500 YouTube videos across 100 Indian creators, with engagement rates, outlier scoring vs creator baseline, and a public Streamlit product that estimates views before publish. Seeking Data Analyst or BI Analyst roles.

PROFESSIONAL EXPERIENCE

Data Engineer Intern, SKF (Fortune 500 Industrial Technology) May 2026 – Present | Bangalore
Microsoft Power Platform · SharePoint · Office 365 · Power BI · factory operations

- Replaced paper 5S factory audits with a production 11-screen Power Apps system on the SKF Office 365 tenant: structured capture, photo evidence, scoring, and action tracking used by factory teams.
- Modeled SharePoint-backed operational data (audit drafts, zone lists) with identity-aware, zone-scoped write-back so audits become queryable rows, not files in email.
- Shipped score-card and compliance-trend views for plant leadership: per-pillar totals, pass/fail against a qualifying bar, and weakest-pillar bottleneck reporting.

GenAI Data Analytics Job Simulation, Tata Group (Forage) 2024

- Modeled delinquency risk on structured financial datasets; produced executive-ready recommendations with emphasis on interpretability and next actions.

PROJECTS

Indian Creator Lab | Python, pandas, scikit-learn, YouTube Data API, SQLite, Streamlit Live demo
know-stats.streamlit.app · github.com/bannushaxddd/indian-creator-lab

- Built a public analytics product that scores a draft YouTube video against a lab of 100 Indian creators (50 tech, 50 fashion/beauty) and ~3,500 videos; live at know-stats.streamlit.app.
- Designed snapshot tables for views, likes, and comments; defined engagement as (likes + comments) / views and outlier as views / that creator's median. Feature table plus gradient boosting for view ranges and nearest-neighbor matches.

GETYOQUERY | SQL, PostgreSQL, Node.js, schema-aware NL-to-SQL
github.com/bannushaxddd/GETYOQUERY

- Natural language to SQL across 8 dialects (PostgreSQL, MySQL, SQLite, SQL Server, BigQuery, Snowflake, Oracle, DuckDB) with schema-aware prompts, parameterized queries, and PostgreSQL query history so the model cannot invent column names.

Observability Dashboards | Prometheus, Grafana, Alertmanager, Loki
github.com/bannushaxddd/prometheus-grafana-stack

- End-to-end metrics and log dashboards: scrape configs, Grafana boards, alert routing, and custom application metrics used as an operating surface.

TECHNICAL SKILLS

SQL & Databases: SQL, PostgreSQL, MySQL, SQLite, schema design, joins, query history, parameterized queries

Python & Analysis: Python, pandas, NumPy, scikit-learn, feature engineering, exploratory analysis, APIs

BI & Visualization: Power BI, Streamlit, Grafana, dashboards, scorecards, reporting

Data Engineering: data modeling, snapshot pipelines, SharePoint lists, ETL-style collectors, YouTube Data API

Tools: Excel, Power Apps, Office 365, Git, GitHub, Docker

EDUCATION & CERTIFICATIONS

B.Tech, Artificial Intelligence & Machine Learning, PES College of Engineering Bangalore
Certifications: Generative AI Prompt Engineering Basics, IBM · GenAI Powered Data Analytics, Tata Group (Forage)
